

Correction to “Endolysins of *Bacillus anthracis* Bacteriophages Recognize Unique Carbohydrate Epitopes of Vegetative Cell Wall Polysaccharides with High Affinity and Selectivity”

Kai-For Mo, Xiuru Li, Huiqing Li, Lieh Yoon Low, Conrad P. Quinn, and Geert-Jan Boons*

J. Am. Chem. Soc. **2012**, *134*, 15556–15562. DOI: 10.1021/ja3069962

Page 15556, abstract graphic; page 15557, Figures 1 and 2; and page 15558, Scheme 2. There is a drawing error in the structures of the secondary cell wall polysaccharide of *B. anthracis*, compounds **1** and **25–28**. For the C-3 galactosyl moieties, the bold wedges should be between C1–O–C5–C4 instead of C1–C2–C3–C4. As an illustration, see the correct structure of compound **1** below.
