

Crystallographic Characterization of 12-Helical Secondary Structure in β -Peptides Containing Side Chain Groups [*J. Am. Chem. Soc.* **2010**, *132*, 13879–13885].
Soo Hyuk Choi, Ilia A. Guzei, Lara C. Spencer, and Samuel H. Gellman*

Page 13884, Table 2. Footnote *a* should state that the number in brackets indicates the number of measured and averaged torsion angles, not distances. The average ψ value for ACHC should be changed to $-133(17)$ [10].

Page 13884, Figure 5. Two data points for ACHC residues were inadvertently left out of the ψ – θ plot in the lower right of the figure. The corrected plot is shown below.

These corrections do not affect any of the conclusions drawn in the paper.
