Hai-Bing Xu, Li-Yi Zhang, Jun Ni, Hsiu-Yi Chao, and Zhong-Ning Chen*: Conformation Changes and Luminescent Properties of Au–Ln (Ln = Nd, Eu, Er, Yb) Arrays with 5-Ethynyl-2,2'-Bipyridine

Pages 10744–10752. In this recent publication, we reported a series of Au–Ln complexes using gold(I) complexes as synthetic precursors. During the review process, we inadvertently omitted the recently published reference by Vicente et al. to the precursor compounds (bpyC≡CAu)₂-(μ-dppe) (**1**) and (bpyC≡CAu)₂-(μ-dppb) (**3**): Vicente, J.; Gil-Rubio, J.; Barquero, N.; Jones, P. G.; Bautista, D. *Organometallics* **2008**, 27, 646. In fact, our related results had been accomplished in 2006 as part of the Ph.D. Dissertation of Hai-Bing Xu, the first author of this paper.

We also add two references of Vicente's group on gold(I) alkynyl complexes: (a) Vicente, J.; Singhal, A. R.; Jones, P. G. *Organometallics* **2002**, 21, 5887. (b) Vicente, J.; Chicote, M. T.; Álvarez-Falcón, M. M.; Jones, P. G. *Organometallics* **2005**, 24, 2764.

Note Added after ASAP Publication. This paper was released ASAP on December 5, 2008. Clarifying text was added, and the revised version was posted on April 1, 2010.
