

Enantioselective Synthesis of Biphenols from 1,4-Diketones by Traceless Central-to-Axial Chirality Exchange

Fenghai Guo, Leah C. Konkol, and Regan J. Thomson*

Journal of the American Chemical Society **2011**, 133, 18–20 DOI: 10.1021/ja108717r

Page 18. The structure of compound 3 in Figure 1 was incorrectly drawn. The correct structure is shown below:

In the Supporting Information the following corrections should be made: The optical rotation for compound 2a should be: $[\alpha]_D^{20} = -9.3$ (c 0.06, CHCl_3). Data for compound 3a were inadvertently reported in the wrong enantiomeric series. The structures in the manuscript and experimental section are correct as drawn, but the data should be: Retention times: 23.8 min [minor enantiomer], 36.1 min [major enantiomer]. 99:1 enantiomeric ratio. $[\alpha]_D^{20} = +33.1$ (c 0.08, EtOH).
