ACS Chem. Biol. **2013**, 8 (2), 360–7. DOI: 10.1021/cb300434e.

In the course of continued studies on the work presented in our recent paper in *ACS Chemical Biology* (2013, 8, 360–7), we have not been able to trace two of the control PNAs and the original data of these (PNAs 4101 and 4102 from Table 1). Thus, we have resynthesized these (now numbered PNA 4483 and PNA 4480) and reproduced the data reported in Table 1 (the measured molecular masses for PNA 4483 and PNA 4480 were 4324 and 5138, respectively). In addition, two typographical errors were identified: The sequence of entry PNA 3759 in Table 1 should be “H-D(KFFKFFKFFK)-eg1-ctcactactct-NH₂” and that of PNA3757 should be “H-RFRRFRFRFRFR-Ahx-(βAla)-ttcaacatagt-NH₂”.
