

Conformational Control of Thymine Photodimerization in Single-Strand and Duplex DNA Containing Locked Nucleic Acid TT Steps [*J. Am. Chem. Soc.* **2010**, *132*, 12856–12858]. Mahesh Hariharan, Martin McCullagh, George C. Schatz, and Frederick D. Lewis*

Page 12857. In Table 1, the experimental quantum yields for thymine dimer formation from the dinucleotides TT (**1**) and T_LT_L (**1L**) should be $\Phi_{\text{TT}} = 9.5 \times 10^{-3}$ and $\Phi_{\text{T}_L\text{T}_L} = 83 \times 10^{-3}$.
