

Correction to Organometallic Iridium(III) Anticancer Complexes with New Mechanisms of Action: NCI-60 Screening, Mitochondrial Targeting, and Apoptosis

Jessica M. Hearn, Isolda Romero-Canelon, Bushra Qamar, Zhe Liu, Ian Hands-Portman, and Peter J. Sadler*

ACS Chem. Biol. **2013**, 8(6), 1335–1343. DOI: 10.1021/cb400070a

The caption for Figure 5 in the original publication incorrectly stated that data for complexes 1–4 were shown. It should refer only to data for complex 1. The corrected caption reads as follows:

Figure 5. Bar graph showing the mitochondrial membrane polarization, determined by a reduction in red (FL2) fluorescence, by complex 1 against that of a negative and positive control (5 μ M carbonyl cyanide *m*-chlorophenylhydrazine). *p*-values were calculated after a Welch *t* test with the negative control data. Each value is the mean taken from 3 replicates, with error bars for the standard deviation.
